## PROJECTS

- **Pic-Bit:**  
It is basically a blogging application, In which user can sign up and login and see all the blogs and user also attach our blog in the app.

This Application support blogs in image, video and text format.  
It's database is a cloud based (Fire base).

- **E-commerce:**

It is a online shopping application like Amazon and Ali-baba-express, in which admin register product images and upload price. In this application User need to logged in to purchase any item. We also add Google dependence to increase the reliability of the software

- **AU Bank application:**

It is a merchant Application through which customer can apply for Qr and and after approval customer can make transaction with their respective Qr code. This application is a banking application, all data are fetching from the bank server. User can also check for application approve or rejected status. We have indulged multiple validation in this application to make it secure and safe. User can also view and edit the form after submit. In this app we use location library to fetch real time location of the user.

- **Flavor applications:**

We can create multiple falvor application of schools and colleges.

- **GamePlay Parcel:**

It is based on gaming app in which user can rent multiple game by queue . Before rent any game user need to purchase subscription. In this app we also use social login with firebase.

In this app we get all data form apis. Basically we rent games for playstation4, playstation5, Switch nitendo and many more. In this app we also view the trailer of any game, we aslo integrate youtube api that show trailer of games in app.

- **Transax:**

As you See the name this app is related to Transaction, In which the admin can enter transactions details of currency exchange and these transactions are also print by thermal printer.

We implement bluetooth printing functionality to print transactions of currency exchange. We also add language change option to change language according to the user preference. In this app user also view the transaction details according to there requirement, We implement Date filter to filter transaction. In this app user can also add client details and company as well. And these details are store in the api and user can also view these details.

- **Inventory:**

This application is related to kept record of liquor. In this app we import and export csv and xls file. When we import csv or xls file. Then our app read this file and convert it in to json file and save data on firebase. We can import and export multiple data with different location. We also able to do changes in the app. We export data in csv and xls format.

- **Tradebid:**

This application is basically related to freelancer.com. In which we have homeowner and contractor. Homeowner post new jobs for contractor and contractor place bids on those jobs. After project completion contractor is able to request fund it payment is not transfer to his account. The homeowner is also able to post milestone jobs these jobs are task based, after each tasks fund transfer to contractor. We implement chat functionality also. We use react-native in this project.

- **Fashionstore:**

This application is an ecommerce app. In which we merge wocommerce and shopify apis in the project. In this we just add posts in wocommerce admin then it will show in app. User is also able to place order. We use react-native in this project.
